INTERNET SYSTEM

2

NETWORK SOFTWARE

- Protocols & Layers
- Internetworking
- IP/TCP

INTERNET ENGINEERING

LECT-6, S-3
IN2004S, javed@kent.edu
 Javed I. Khan@2004

Protocols

- All parties involved in a communication must agree on a set of rules to be used when exchanging messages. Diplomats call it protocol.
- Tom Merrill:
 - connected two computers (Lincoln Lab's TX-2 and the SDC-Q-32 at Santa Monica) with a 2000 bps crude modem, which he called an automatic dialer, and was able to send message back and forth.
 - Merrill set up a procedure for grouping characters into messages, sending them across links, and checking to see if message has arrived. If not, message was retransmitted.
 - Merrill called his procedure Protocol.

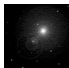

INTERNET ENGINEERING

LECT-6, S-4
IN2004S, javed@kent.edu
 Javed I. Khan@2004

Protocols Suits & Layering

- Making communication happen is complex.
- Thus instead of having a single giant protocol taking care of everything, it is better if the communication problems can be divided into small pieces each focused on a small manageable sub-problem.

INTERNET ENGINEERING

LECT-6, S-5
IN2004S, javed@kent.edu
 Javed I. Khan@2004

Layering Approach

- Making communication happen is complex.
- Thus instead of having a single giant protocol taking care of everything, it is better if the communication problems can be divided into small pieces each focused on a small manageable sub-problem.

Seven layer OSI model

INTERNET ENGINEERING

LECT-6, S-6
IN2004S, javed@kent.edu
 Javed I. Khan@2004

Layering Approach

Seven layer OSI model

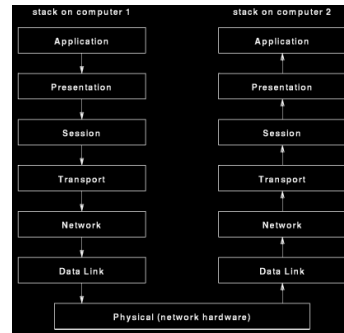

- Physical:
 - example RS-232 specs.
- Data Link:
 - frame generation, byte stuffing, checksum etc.
- Network:
 - addressing, forwarding.
- Transport:
 - reliable transfer.
- Session:
 - login, security, etc.
- Presentation:
 - data translation, representation.
- Application:

Nested Headers

INTERNET ENGINEERING

LECT-6, S-10
IN2004S, javed@hert.edu
Javed I. Khan@2004

Some Important Protocol Functions

- Sequencing Out-of-Order Packets
 - A connectionless protocol may route different packets to be routed through different paths.
 - How to handle?
 - Sender inserts a field called sequence number. Receiver maintains a buffer, if a new packet arrives inserts it in the buffer in right location. If all previous packets are there, it is delivered. If delivered, also checks for additional packets in buffer.
- Eliminate Duplicate Packets
 - Can duplication occur in CSMA/CD?
 - Combine with sequencing, check if it has already been received, or in the buffer discard it.

INTERNET ENGINEERING

LECT-6, S-11
IN2004S, javed@hert.edu
Javed I. Khan@2004

Protocol Functions (contd..)

- Retransmission of Lost Packets
 - transmission error makes packet loss a part of digital communication.
 - Create some form of ACK/ buffer.
- Avoiding Replay
 - example: packet-3 of last transmission arrives late as a packet-3 of a later transmission, resulting in drop of the actual packet-3.
 - Solution: unique ID for each session.

INTERNET ENGINEERING

LECT-6, S-12
IN2004S, javed@hert.edu
Javed I. Khan@2004

Flow Control to Prevent Data Overrun

- Computers do not operate all at same speed.
- Solution: Stop-and-go

- Stop-and-go can be inefficient.
- Allow more than 1 packet to be transmitted without wait for acknowledgement.

LECT-6, S-13
IN2004S, javed@hert.edu
Javed I. Khan@2004

INTERNET
ENGINEERING

Efficiency & Flow Control

Stop-and-go can be inefficient. Allow more than 1 packets to be transmitted without wait for acknowledgement.

- How much improvement?
- $T_w = \min(B, T_{\text{stop-and-go}} \times W)$

LECT-6, S-14
IN2004S, javed@hert.edu
Javed I. Khan@2004

INTERNET
ENGINEERING

Congestion Control

- Let all the links are 1.5Mbps. What if 1 & 2 both are sending at 15 Mps rate?
- Solution:
 - Drop or delay packet
- Management:
 - Let the switch send back warning to senders.
 - Send back to sender, or mark in message via receiver.
 - Let senders count packet loss and adjust.

LECT-6, S-15
IN2004S, javed@hert.edu
Javed I. Khan@2004

INTERNET
ENGINEERING

Protocol Design

- A delicate task!
- Examples:
 - sequence number size big or small?
 - Congestion control or flow control?
 - Message size?

Vendor	Stack
Novell Corporation	Netware
Banyan System Corporation	VINES
Apple Computer Corporation	AppleTalk
Digital Equipment Corporation	DECNET
IBM	SNA
(many vendors)	TCP/IP

IN2004S, javed@hert.edu
Javed I. Khan@2004

INTERNET
ENGINEERING

IP4

Internet Protocol

- Objective: Universal Service.
- Can we have one single network technology serving all?
- Why networks cannot communicate?
 - What are the two main sources of incompatibility?
- What is **internet** and **Internet**?

LECT-6, S-18
IN2004S, javed@hert.edu
Javed I. Khan@2004

INTERNET
ENGINEERING

The Main Hardware Component

- **Routers:**

- like bridge connects two network.
- Performs filtered frame forwarding.
- But, also understands packet format.
- Two sides can be two technologies.

LECT-6, S-19
IN2004S, javed@kent.edu
Javed I. Khan@2004

Internet Architecture

Why Routers are
Bridge like, but not
Switch like?

LECT-6, S-20
IN2004S, javed@kent.edu
Javed I. Khan@2004

Protocols for Internetworking

- A number of attempts were made to make internetworking possible. However, the most successful one is the protocol suit known as TCP/IP. Its development begun in the 1970s by DARPA.
- Now Internet connects more than 80 million computers across more than 107 countries.

LECT-6, S-21
IN2004S, javed@kent.edu
Javed I. Khan@2004

TCP/IP Protocol Stack

Host have all 5 layers.
How many layers routers
need?

- Application
 - same as ISO
- Transport
 - reliability
- Internet
 - format consistency
 - routing
- NI
 - same as ISO
- Physical
 - same as ISO

LECT-6, S-22
IN2004S, javed@kent.edu
Javed I. Khan@2004

- **IP- Internet Protocol**

- Global Addressing Scheme
- Local Address Resolution
- Datagram Forwarding
- Encapsulation, Fragmentation & Reassembly

- **TCP- Transmission Control Protocol**

- Connection startup & shutdown
- Reliability: ordering, missing data handling

LECT-6, S-23
IN2004S, javed@kent.edu
Javed I. Khan@2004

IP Addressing Scheme

- To achieve an illusion of single network, all computers, despite their differences in physical technology, should have a uniform addressing scheme.
- This is done as a software address.
- In this abstraction, each host in internet is assigned an unique 32 bit address called IP address.

LECT-6, S-24
IN2004S, javed@kent.edu
Javed I. Khan@2004

IP Addressing Format

INTERNET
ENGINEERING

IP address
= Network number + host number

Network number

Host number

32 bits

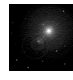

The hierarchy allows host addresses to be assigned independently.
What is the right allocation for bits for each part?

If n bits are for network than how many networks can be there?

How many hosts can be in those networks?

LECT-6, S-25
IN2004S, javed@kent.edu
Javed I. Khan@2004

IP Addressing Classes

INTERNET
ENGINEERING

- IP divides the addresses into 5 classes to accommodate networks of varying sizes.

bits	0	1	2	3	4	8	16	24	32	
Class A	0	prefix				suffix				
Class B	1	0	prefix			suffix				
Class C	1	1	0	prefix		suffix				
Class D	1	1	1	0	multicast address					
Class E	1	1	1	1	reserved for future use					

LECT-6, S-26
IN2004S, javed@kent.edu
Javed I. Khan@2004

Class Computation

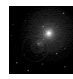

INTERNET
ENGINEERING

First Four Bits Of Address	Table Index (in decimal)	Class of Address
0000	0	A
0001	1	A
0010	2	A
0011	3	A
0100	4	A
0101	5	A
0110	6	A
0111	7	A
1000	8	B
1001	9	B
1010	10	B
1011	11	B
1100	12	C
1101	13	C
1110	14	D
1111	15	E

- Determination of address class is crucial. Generally a machine reads 4 leading bits and determined the class from a table.

LECT-6, S-27
IN2004S, javed@kent.edu
Javed I. Khan@2004

Dotted Decimal Notation

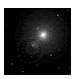

INTERNET
ENGINEERING

32-bit Binary Number	Equivalent Dotted Decimal
10000001 00110100 00000110 00000000	129 . 52 . 6 . 0
11000000 00000101 00110000 00000011	192 . 5 . 48 . 3
00001010 00000010 00000000 00100101	10 . 2 . 0 . 37
10000000 00001010 00000010 00000011	128 . 10 . 2 . 3
10000000 10000000 11111111 00000000	128 . 128 . 255 . 0

Class	Range of Values
A	0 through 127
B	128 through 191
C	192 through 223
D	224 through 239
E	240 through 255

LECT-6, S-28
IN2004S, javed@kent.edu
Javed I. Khan@2004

Network Sizes

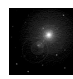

INTERNET
ENGINEERING

Address Class	Bits In Prefix	Maximum Number of Networks	Bits In Suffix	Maximum Number Of Hosts Per Network
A	7	128	24	16777216
B	14	16384	16	65536
C	21	2097152	8	256

LECT-6, S-29
IN2004S, javed@kent.edu
Javed I. Khan@2004

Address Management

INTERNET
ENGINEERING

- IANA assigns network numbers or blocks of network numbers to ISPs.
- Big ISPs further distribute the network numbers to smaller ISPs connected to them.
- Network administrators assigns the host numbers to individual computers.

LECT-6, S-30
IN2004S, javed@kent.edu
Javed I. Khan@2004

An Example Private TCP/IP Network

Can you determine the network classes?

Class	Range of Values
A	0 through 127
B	128 through 191
C	192 through 223
D	224 through 239
E	240 through 255

LECT-6, S-31
IN2004S, javed@hert.edu
Javed I. Khan@2004

Special Addresses

- Network Address (n.n.n.0, n.0.0.0, etc)
 - Never appears as the destination in an IP packet.
- Direct Broadcast (n.n.n.255, n.n.255.255, etc.)
 - All computer in the logical network.
- Limited Broadcast (255.255.255.255)
 - All computers in physical network
- This computer (0.0.0.0)
 - used during booting.
- Loopback (127.any)
 - used for testing.

Prefix	Suffix	Type Of Address	Purpose
all-0s	all-0s	this computer	used during bootstrap
network	all-0s	network	identifies a network
network	all-1s	directed broadcast	broadcast on specified net
all-1s	all-1s	limited broadcast	broadcast on local net
127	any	loopback	testing

LECT-6, S-32
IN2004S, javed@hert.edu
Javed I. Khan@2004

Router Addresses

Routers have more than one IP addresses.
Some computers may also be in more than one networks.

LECT-6, S-33
