<u>General Course Information</u>		 INTERNET ENGINEERING
This course will not teach you how to write HTML or Java code. Nor will make you a Web Master!		
In this course you will learn		
<ul style="list-style-type: none"> •the design principles, •architecture, •protocols and algorithms behind the components of the complex system which is known as Internet .

Javed I. Khan@2004

The Internet is a global network of networks enabling computers of all kinds to directly and transparently communicate and share services throughout much of the world. Because the Internet is an enormously valuable, enabling capability for so many people and organizations, it also constitutes a shared global resource of information, knowledge, and means of collaboration, and cooperation among countless diverse communities.

Javed I. Khan@2004

The Internet is more important in what it enables than what it is; more phenomenon than fact. Yes, the Internet is networks, software, computers and other technologies; but more so, it is a catalyst of change, a new mass medium, a culture, a mind warp, new things never before imagined.

Javed I. Khan@2004

vBNS Features

- Low latency (average coast to coast less than 100 ms)
- High throughput (over 490 Mbps of payload)
- Stable (99.95% or greater service availability)
- Uncongested (average utilization less than 50%)
- 622 Mbps 14,000+ route mile backbone network

- Today, the vBNS connects:
 - five supercomputing centers
 - about 100 universities
 - peers about 11 other Networks.
