

Homework #5 — Due 11/9/98

1. Perform the following arithmetic operations in 5-bit two's complement arithmetic, showing your work:

$$\begin{array}{r} 6 \quad 00110 \\ + \underline{7} \quad + \underline{00111} \\ \hline \quad \quad 01101 = 13 \end{array}$$

$$\begin{array}{r} 6 \quad 00110 \quad 00110 \\ - \underline{7} \quad - \underline{00111} \quad + \underline{11001} \\ \hline \quad \quad 11111 = -00001 = -1 \end{array}$$

$$\begin{array}{r} 6 \quad 00110 \quad 00110 \\ + \underline{-4} \quad - \underline{00100} \quad + \underline{11100} \\ \hline \quad \quad 1)00010 = 2 \text{ (ignore carry)} \end{array}$$

$$\begin{array}{r} -2 \quad -00010 \quad 11110 \\ - \underline{-5} \quad - \underline{-00101} \quad + \underline{00101} \\ \hline \quad \quad 1)00011 = 3 \text{ (ignore carry)} \end{array}$$

Homework #5 — Due 11/9/98

2. Convert to IEEE 754 floating point single precision format, showing your work as you convert between decimal and binary:

● -18.375

$$18 / 2 = 9, \text{ rem } 0 \quad 2 / 2 = 1, \text{ rem of } 0$$

$$9 / 2 = 4, \text{ rem of } 1 \quad 1 / 2 = 0, \text{ rem of } 1$$

$$4 / 2 = 2, \text{ rem of } 0$$

$$0.375 * 2 = 0.75$$

$$0.75 * 2 = 1.5$$

$$0.5 * 2 = 1.0$$

$$\text{Therefore, } -18.375_{10} = 10010.011_2$$

$$= 1.0010011_2 \times 2^4$$

$$= 1.0010011_2 \times 2^{131-127}$$

$$131 / 2 = 65, \text{ rem } 1 \quad 8 / 2 = 4, \text{ rem of } 0$$

$$65 / 2 = 32, \text{ rem } 1 \quad 4 / 2 = 2, \text{ rem of } 0$$

$$32 / 2 = 16, \text{ rem } 0 \quad 2 / 2 = 1, \text{ rem of } 0$$

$$16 / 2 = 8, \text{ rem } 0 \quad 1 / 2 = 0, \text{ rem of } 1$$

$$\text{Therefore, } 131_{10} = 10000011_2$$

Giving -18.375 in IEEE floating point:

$$1 \ 10000011 \ 001001100000000000000000$$
