

Due in class on Wednesday 22 September 1999

Write 2 pages of typed text (single-spaced, either ASCII text or 10-point word-processor output) summarizing the similarities and differences between the Illiac IV, the MPP, and the CM-2 systems. Do not summarize those machines (i.e., do not repeat the lecture material back to me), but instead explain how the three machines (or perhaps only two of them) are the same because they all..., and explain how two of them differ because one machine... while the other machine....

You can include figures if you like, although they are not necessary, but if you do they must be in addition to the 2-page limit. Part of the goal here is to write as clear a description as possible in a limited amount of space—a very “real world” experience. Also, be certain this description is in entirely your own words.
