

# Final Report

---

## ■ Due 12/11/14

- An individual written report in .doc format describing your project (what it does, how to play it, etc) and how to compile/run it. Include **screen shots** of the running project in your report, and include a reference to the code in the svn. In order to receive credit for your class project, I must be able to compile and run the project as stored in the SVN. So check your project's portability by downloading/compiling/running it on another machine.
- **A nearly complete copy of the final code uploaded to the svn by 5:00pm on 12/9/14.**
- A demo of your project given during the scheduled final exam for the class. 12/11/14, 7:45-10:00am.
