

# Milestone

- Use Road map to set milestones that will help you focus on key aspects of the project.
- Base milestones on the goals of the project.

# First Bottleneck

- Controller group must create an API for the cluster group and the widget group to use to get and store information.
- The API need not be functional immediately but it must be designed ASAP.

# What did you do between classes?

- If you don't do a significant amount of work between classes you will not complete your project.
